<sup>1</sup> The Singapore Prospectus is available for collection at Principal Asset Management (S) Pte. Ltd. (Company Registration No. 200607208K), 50 Raffles Place, #22-03A & B Singapore Land Tower, Singapore 048623 from Monday to Friday (9am to 5pm) or may be downloaded at [www.principal.com.sg](http://www.principal.com.sg).

<b>Investment Strategy</b>	
<p>The Fund may invest at least 70% of its NAV in equities and up to 28% of the Fund's NAV in other permissible investments. In line with its objective, the investment policy and strategy of the Fund will focus on investment in shares of companies with growth potential. Generally, the Fund will invest primarily in large capitalisation companies listed on the main market of Bursa Malaysia. The Fund may also invest in the ACE market to provide better returns.</p> <p>The asset allocation strategy for the Fund is as follows:</p> <ul style="list-style-type: none"> <li>▪ at least 70% of the Fund's NAV will be invested in equities;</li> <li>▪ up to 28% of the Fund's NAV may be invested in other permissible investments; and</li> <li>▪ at least 2% of the Fund's NAV in liquid assets.</li> </ul> <p>The asset allocation will be reviewed periodically depending on the country's economic and stock market outlook. In a rising market, the 98% limit may be breached. However, the Manager will seek to adjust this within a time frame approved by the Trustee.</p> <p>The Fund will be managed with high tracking error by combining a top-down asset and sector allocation process with a bottom-up stock selection process. The asset allocation decision is made after a review of macroeconomic trends in Malaysia and other global economies. In particular, the Manager analyzes the direction of GDP growth, interest rates, inflation, currencies and government policies. The Manager will then assess their impact on corporate earnings and determine if there are any predictable trends. These trends form the basis for sector selection. For stock selection process, the investment strategy of the Fund will be predominantly based on bottom-up stock selection and the growth style of equity investing instead of investing mainly in the stocks represented in the benchmark. Consequently, the Fund's individual stock and sector weightage will deviate significantly from the benchmark, thus leading to high tracking error. The criteria for stock selection would include improving fundamentals and growth at reasonable valuations. Stock valuation fundamentals considered are earnings per share growth rate, return on equity, price earnings ratio and net tangible assets multiples. The strategy of the Fund also includes utilizing liquid assets dynamically in the changing market conditions.</p> <p><u>Benchmark</u></p> <p>The Fund's benchmark, the FTSE Bursa Malaysia Top 100 Index, is not a target for the Fund's performance to beat, nor used as a constraint on how the Fund's portfolio is to be constructed, nor a guaranteed return or forecast of future return and is only used as a reference for performance comparison purpose.</p>	<p>Refer to paragraph 7.2 of the Singapore Prospectus for further information on the investment focus and approach.</p>
<b>Parties Involved</b>	
<p><b>WHO ARE YOU INVESTING WITH?</b></p> <p>The Manager is Principal Asset Management Berhad.  The Trustee is HSBC (Malaysia) Trustee Berhad.  The Custodian is The Hongkong and Shanghai Banking Corporation Ltd.  The Singapore Representative is Principal Asset Management (S) Pte. Ltd.</p>	<p>Refer to paragraphs 2 to 5 of the Singapore Prospectus for further information on the role and responsibilities of these entities and what happens if they become insolvent.</p>
<b>KEY RISKS</b>	
<p><b>WHAT ARE THE KEY RISKS OF THIS INVESTMENT?</b></p> <p><b>The value of the product and its dividends or coupons may rise or fall. These risk factors may cause you to lose some or all of your investment:</b></p>	<p>Refer to paragraphs 9.1 and 9.2 of the Singapore Prospectus for further information on risks of the product.</p>
<b>Market and Credit Risks</b>	
<ul style="list-style-type: none"> <li>• <b>You are exposed to Market Risk</b>  Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the fund's NAV.</li> </ul>	

Liquidity Risks					
<ul style="list-style-type: none"> <li>• Liquidity risk can be defined as the ease of liquidating an asset depending on the asset's volume traded in the market. If the Fund holds assets that are illiquid, or are difficult to dispose of, the value of the Fund will be negatively affected when it has to sell such assets at unfavourable prices.</li> <li>• The Fund is not listed and there is no secondary market for its Units. You can only redeem your investment on a Dealing Day.</li> <li>• All redemption requests should be made to the Manager.</li> <li>• The Manager may, with the approval of the Trustee, suspend the subscription, switching and redemption of Units during certain circumstances specified in the Singapore Prospectus and the Deed.</li> </ul>					
Product-Specific Risks					
<ul style="list-style-type: none"> <li>• <b>You are exposed to Stock Specific Risk</b> Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the Fund's NAV.</li> <li>• <b>Risks associated with investment in warrants</b> There are inherent risks associated with investment in warrants. The value of warrants is influenced by the current market price of the underlying security, the exercise price of the contract, the time to expiration of the contract and the estimate of the future volatility of the underlying security's price over the life of the contract. Generally, the erosion in the value of warrants accelerates as it approaches its expiry date. Like securities, the Manager will undertake fundamental research and analysis on these instruments with an aim to mitigate the risks.</li> <li>• <b>You are exposed to Currency Risk</b> Classes may be denominated in currencies other than the base currency (MYR) and changes in the exchange rate between the base currency and the denominated currency of the Class may lead to a depreciation of the value of the investor's holding as expressed in the currency denomination of the Class.  As such, investors should realise that currency risk is considered as one of the major risks due to the volatile nature of the foreign exchange market. Currently, the Manager does not seek to mitigate the currency risk. Hence, investors of the Fund should be prepared to assume the currency risk.</li> <li>• <b>You are exposed to Concentration Risk</b> The Fund may invest in securities of a single or a limited number of countries. Where the Fund invests in a single or a few, select countries, it will be exposed to fluctuations in the economies of these countries, and the market, currency, political, social environment and other risks related specifically to these countries, which may affect the market price of its investments in these countries. Exposure to a single or limited number of countries also increases the potential volatility of the Fund due to the increased concentration risk as they are less diversified compared to exposure to specific regional or global markets.</li> <li>• <b>Risks associated with use of Financial Derivatives Instruments ("FDIs")</b> The Fund may invest in FDIs for purposes of hedging and it may be subject to risks associated with such investments. Investments in derivatives may require the deposit of initial margin and additional deposit of margin on short notice if the market moves against the investment positions. If no provision is made for the required margin within the prescribed time, the Fund's investments may be liquidated at a loss.</li> </ul>
